

The feature of traffic and weather for different cities on xm radio needs to be continued. In my job I am often sent to phil., new york, and chicago, and the ability to use my xm radio before entering the area has saved me time by helping me to avoid traffic tie ups, ( as well as having to search for a station that even gives traffic reports on a regular time frame, and hitting that time exactly). I sincerely hope that you will reject the NAB's petition 04-160, and let xm continue to provide the excellent services that it does.
